

**Ingenieurbüro
Material- und Verfahrenstechnik
Dr.-Ing. Georg Schober**

**engineering consultant
on building construction materials**

The Ingenieurbüro Schober provides competent technical services in the field of production and development of ceramic construction materials at short time.

You will get efficient support on all questions about material development and process engineering, may be to strengthen your own R & D section or to start new projects in developing products or process engineering. For improving production process, analysing and solving problems in your section of material production, the Ingenieurbüro Schober is available as flexible and costs efficient consultant for you.

consultative offers

- ◇ technical services for production and R & D
- ◇ managing research and development projects
- ◇ survey reports, expert evidences
- ◇ literature searches in the fields of subjects
- ◇ working out expert systems (scripts, software)
- ◇ training of employees

subjects

- ◇ ceramic materials: steam cured construction materials (aircrete, sand lime bricks, calcium silicate based materials), bricks (for wall, tiles), concrete bricks, ceramics in buildings (floor tiles, white ware etc.), concrete
- ◇ raw materials to produce ceramic materials
- ◇ process engineering of ceramic materials (autoclaving, sintering, drying, grinding, fermenting/foaming, preparing raw materials etc.)
- ◇ research and examination methods on ceramics

More than ten years of experience in the german building industry and the education at university as material scientist on ceramics are the solid basis for the supply presented in this paper.

Don't hesitate to get in use of the experts know-how which is offered here. Together we will be successful.
